x 4, Delivery 11/12 Months â€“.Q: Keras+Tensorflow: Unable to build Convolutional Network I am trying to create a simple
convolutional neural network. I am a beginner in Tensorflow and Keras so I am following the tutorials here: Keras has a small
implementation of convolutional networks. For example, this is the input neural layer: input_layer = Input(shape=(32, 32, 3))
and this is the output layer: x = GlobalAveragePooling2D()(input_layer) x = Dense(10)(x) x = Activation('softmax')(x) I do this:
import tensorflow as tf import numpy as np from keras import layers as nn # Load our dataset, shuffled and split into train/test
set. # X_train and y_train are np.ndarray with shape=(#samples, 32, 32, 3) X_train, X_test, y_train, y_test
